

# **NASA Earth Science Image Analysis for Climate Change Decisions.**

**PRESENTATION BY: Peter H. Hildebrand**

## **ABSTRACT:**

This talk will briefly outline the ways in which NASA observes the Earth, then describes the NASA satellite measurements, and then proceeds to show how these measurements are used to understand the changes that are occurring as Earth's climate warms.

(As the talk consists only of the Powerpoint presentation, there is no printed version, only the slide show. The slides are from Goddard earth scientists and subject to limited editing, have all been used before.)
